QuoteLock

One clear quote, from first chat to verified order, for MSME owners on a phone, in their language.

Enterprise Track A: Project Udyam Digital

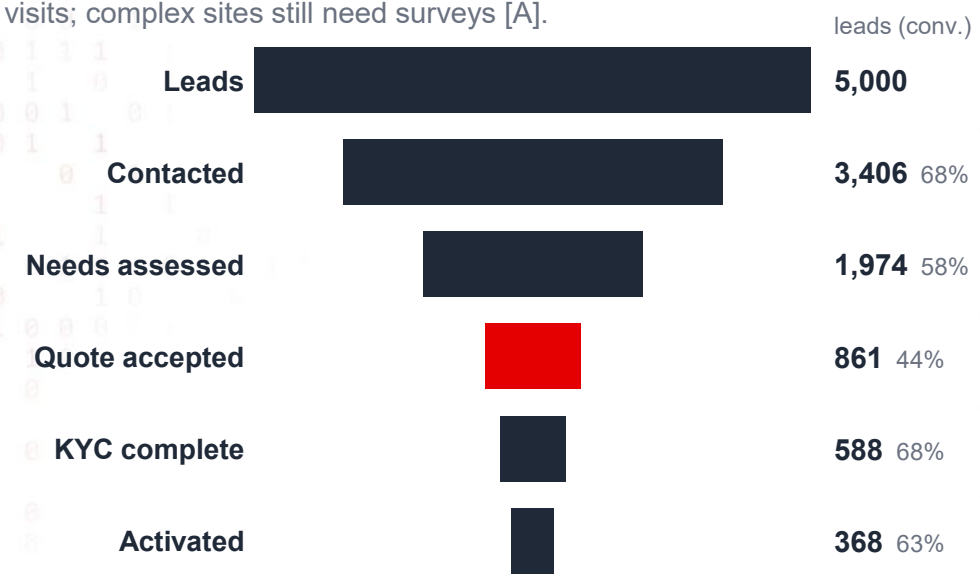

Logging | VIT Vellore

Platform Partner unstop

1,113 assessed leads don't accept; 493 accepted quotes don't activate

Earlier, between contact and needs assessment, 827 leads were lost because no visit happened [V]. Self-discovery can cut needless first visits; complex sites still need surveys [A].

Lead to contacted: 1,594 of 5,000 lost [V]
805 unreachable, 470 not interested, 319 wrong number

Contacted to needs assessed: 1,432 of 3,406 lost [V]
827 never got a visit (531 owners had no time, 296 visits not scheduled); 325 locked in; 280 wanted mobile only

Assessed to quote accepted: 1,113 of 1,974 lost [V]
385 quote too complex or slow; 621 price; 107 decided to wait
The 621 price objections are not assumed recoverable [A]

Quote accepted to activated: 493 of 861 lost [V]
273 paperwork or KYC (94 missing a GST or Udyam document)
220 install delay, infeasible site, cancellation or failed payment

Bar widths are proportional to the leads at each stage.

Legend: V = verified (supplied synthetic data); V-proto = team-reported prototype test; E = external public evidence; A = assumption; P = projection; Accel is fictional. D1 smb_leads.csv: 5,000 synthetic leads from April to June 2026. Each drop reason is recorded at the last stage reached; 16 activations fall after 15 Jul 2026. Counts show where leads stopped and say nothing about recoverable volume. Historical 'quote accepted' comes before KYC, so it is not a verified order.

Professional offices go digital first; Micro earns its place under a CAC cap

Professional suits a self-serve start; surveys, longer installs and GSTIN rules keep Multi-site and Manufacturer assisted.

	Professional offices **Digital first**	**Micro retail** **Capped test**	**Multi-site** **Assisted**	**Manufacturers** **Assisted**
Historical activation [V]	**11.07%**	4.06%	10.99%	12.80%
CAC [V]	**₹10,695**	₹20,007	₹15,614	₹15,324
Historical monthly revenue [V]	**₹6,796**	₹2,505	₹31,233	₹19,980
Gross-revenue coverage [V]	**1.6 months**	8.0 months	0.5 months	0.8 months
Starter bundle [A]	Fibre 300 + 4G/5G backup + 5 email seats + 5 endpoint licences	5G AirFiber 100 + 1 business postpaid line	3 sites × (Fibre 300 + backup + SD-WAN)	20 Mbps leased line + managed firewall + 10 machine-IoT kits
Catalogue range; midpoint [V/A]	₹3,118-3,893; ₹3,506	₹1,198-1,498; ₹1,348	₹13,494-17,694; ₹15,594	₹11,489-17,489; ₹14,489
Setup, minimum term [A]	₹1,500, 12 months	₹0, 6 months	₹19,500, 24 months	₹44,000, 24 months
Typical installation time after provisioning readiness, GSTIN [V]	Fibre 300: 5 days; GSTIN not needed	AirFiber 2 days, postpaid 1 day; GSTIN not needed	SD-WAN 14 days; GSTIN required	Leased line 20 Mbps 21 days; GSTIN required

Micro expansion rule [P]: grow Micro only if CAC ≤ ₹8,088 (6 × ₹1,348 starter revenue [A]). Matched digital-channel Micro CAC is ₹8,068 [V], which leaves ₹20 before any programme cost. The rule tests revenue coverage and says nothing about profit.

Legend: V = verified (supplied synthetic data); V-proto = team-reported prototype test; E = external public evidence; A = assumption; P = projection; Accel is fictional.
D1/D2: CAC = acquisition spend ÷ activations. Gross-revenue coverage = CAC ÷ historical monthly bundle value; it is not a profit or cash payback measure.
D2 [A]: midpoint = (min+max)/2 per unit; setup per unit; term = longest; pre-tax. Matched Micro = Web/WhatsApp/Inbound/Referral (1,247 leads).

A changed bundle becomes a new quote version that needs fresh acceptance

The case describes single-product online sign-up; QuoteLock proposes one order record carrying the eligible bundle, its checks and every revised acceptance [A].

Quote v1

₹999 / month

5G AirFiber 100

Superseded: acceptance void
MIDPOINT-v1 pre-tax preview [A]

Add-on toggled

+₹349/month [A]

Quote v2

₹1,348 / month

5G AirFiber 100
+ Business postpaid line

Revalidated; needs fresh acceptance
MIDPOINT-v1 pre-tax preview [A]

1. Initial quote → 2. Add-on toggled → 3. New version → 4. Revalidate → 5. Fresh acceptance → 6. Order lock

Rules-engine calculation latency: 2.84 ms median / 4.26 ms p90 across 100 prefilled API requests [V-proto, team-reported].
It excludes customer interaction, document processing, OCR, live LLM inference and external network calls, so it does not measure onboarding or quote turnaround.

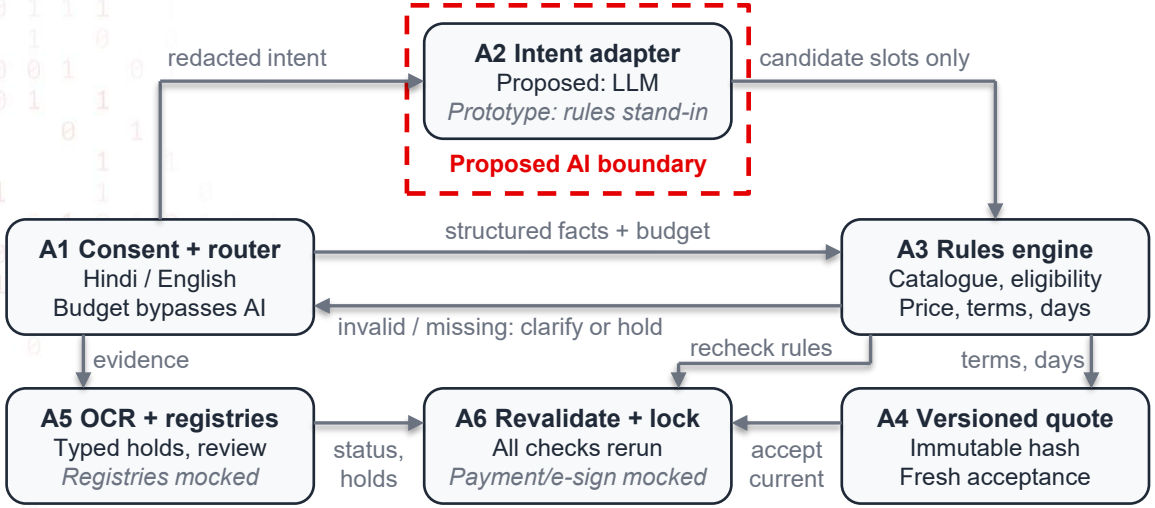

Public journeys by product scope [E]

Provider and product	Price and ordering	KYC and after order
JioBusiness Solution (J1, J2)	Plan tiers and tariff notes; 'Buy Plan' or callback	Business CAF after document verification; self-care order status (FAQ)
TTBS SmartOffice (Tt1)	Bundle enquiry via callback form; no price on page	Not described on the reviewed page
TTBS Smartflo, separate product (Tt2, Tt3, Tt4)	Published plan rates	Portal lists GST/PAN/KYC forms; support tickets
Vi corporate postpaid (V1, V2)	Plan choice and online order	Assisted doorstep KYC, contact within 48 h; ViBA bills and usage

Legend: V = verified (supplied synthetic data); V-proto = team-reported prototype test; E = external public evidence; A = assumption; P = projection; Accel is fictional.
T3/T4 [V-proto, team-reported]: 100 prefilled requests; versioning, hash and acceptance tests. Prices are MIDPOINT-v1 pre-tax previews [A].
E: J1/J2, Tt1/Tt2/Tt3/Tt4, V1/V2 are public pages read on 8 Nov 2026 without transaction tests. They are not a July snapshot or proof of a gap.

Proposed AI boundary: the model reads intent; deterministic rules control the order

Prototype status: the intent adapter is a rules-based stand-in and external services are mocked. The boundary has been tested on synthetic inputs only, not yet with a live LLM.

Outside the boundary: prices, catalogue rows, quote cards, raw IDs, evidence and order writes. Grey italic = mocked or stand-in.

Smart KYC: 12 synthetic specimen packets

4 core-clear	8 held

Automatic OCR + core rules [V-proto, team-reported]
Independent visual check: 5 clear / 7 held [V]
K08 is a conservative OCR false hold
12 specimens are not a real-world KYC failure rate

Prototype validation [V-proto, team-reported]

448 automated tests passed
0 price or ID leaks in 420 generated Hindi/English/Hinglish utterances
30% blocked as uncertain and prompted for clarification

Legend: V = verified (supplied synthetic data); V-proto = team-reported prototype test; E = external public evidence; A = assumption; P = projection; Accel is fictional. Privacy, proposed [A] (legal review pending): consent, minimal fields, masked logs, encrypted vault, scoped hand-off, withdrawal; keep 365 d, abandoned 1 d. E20: designed to support DPDP Act 2023 / DPDP Rules 2025 obligations (phased commencement); not a compliance certification or AI security validation.

Exceptions keep an owner; installation keeps its own clock

Digital intake removes avoidable first visits. Field work stays: specialists and partners own every unresolved case, and physical activation has its own tracker.

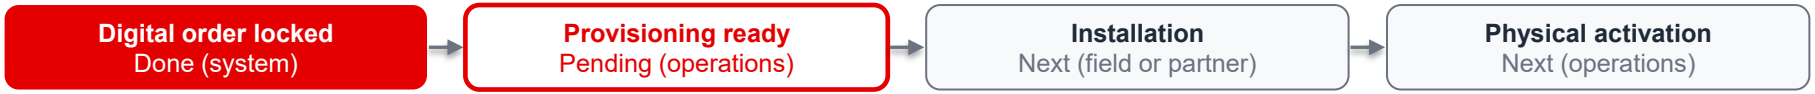

Unresolved cases stay pending with a named owner.

Illustrative exception queue

Case	Status	Owner	Next action
K06	Assigned to specialist	Specialist	Verify GSTIN
K04	Awaiting evidence	Partner	Re-upload certificate
K10	Awaiting evidence	Specialist	Confirm signatory
Survey*	Awaiting site feasibility	Operations	Site survey
Payment*	Awaiting payment	Partner	Retry payment

*K = supplied KYC specimen; * = illustrative status, not a supplied record*

Order tracker: prototype capture for Biz Fibre 300 [V-proto]. A digital lock is not physical activation.

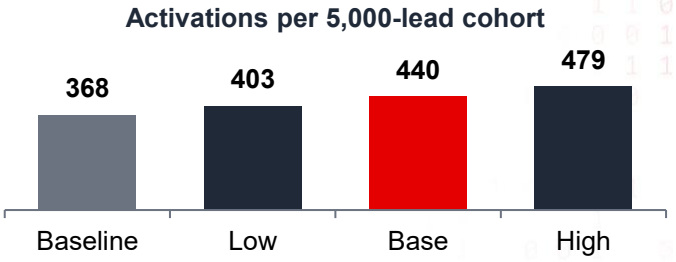

After quote acceptance [V]: 98 installs delayed over 21 days, 41 sites infeasible after KYC, 28 failed first payments and 3.0 status calls per activation.
Typical days after readiness [V]: postpaid 1, AirFiber 2, Fibre 300 5, SD-WAN 14, leased line 21 to 30. None of these is guaranteed.

Legend: V = verified (supplied synthetic data); V-proto = team-reported prototype test; E = external public evidence; A = assumption; P = projection; Accel is fictional.
Roles [A]: partners collect evidence and help no-GST owners onboard (credit for verified closures, rates unpriced); specialists resolve conflicts.
D6: queue priority uses only the reason and readiness, with no outcome, NPS or churn data. * = illustrative status, not a supplied record.

Base case adds about 72 activations per 5,000 leads; the pilot tests feasibility first

Uplifts are assumptions applied to the synthetic April to June cohort [P]; the pilot tests speed, safety and cost and cannot prove uplift.

Metric (baseline [V], scenarios [P])	Baseline	Low	Base	High
Activations per 5,000 leads	368	403	**440**	479
Lead to activation (%)	7.36%	8.05%	**8.80%**	9.58%
Added MRR (₹/month), historical mix	n/a	₹1.42 L	**₹2.92 L**	₹4.52 L
Added MRR (₹/month), starter prices	n/a	₹0.79 L	**₹1.63 L**	₹2.52 L
Marginal CAC (₹)	n/a	₹9,028	**₹6,078**	₹5,095
Blended CAC (₹)	₹15,053	₹14,534	**₹13,589**	₹12,742
Gross-revenue coverage (months)	1.22	1.25	**1.24**	1.22

Axis starts at zero. Low, Base and High are projections [P].

Marginal CAC = added cost ÷ added activations (₹4.36 L ÷ 71.8). **Blended CAC** = all acquisition cost ÷ all activations (₹59.76 L ÷ 439.8).
CAC parity [P]: blended CAC stays at or below today's ₹15,053 while incremental cost per 5,000-lead cohort is ≤ ₹10.80 L. After ₹2.38 L of handling cost, programme spend can reach **₹8.42 L**; the model uses ₹1.98 L, leaving ₹6.44 L of headroom. Profit is not tested.

Days 1 to 14: Preparation and control validation

Days 15 to 59: Intake and randomisation, tiers 1 and 2. Quotas across both arms: Micro 822, Professional 378 (600 per arm) [A]

Days 60 to 90: Follow-up and evaluation: activation within 30 days, intention to treat

Go to a larger controlled test if ≥70% of routine locks take under 10 min, ≥95% of events are logged, every hold has an owner and cost stays in the cap.

Hold to fix and rerun if a Go metric is missed or cost data is incomplete.

Stop at once after an unsafe lock, a skipped check, a privacy incident or an invented serviceability state.

Legend: V = verified (supplied synthetic data); V-proto = team-reported prototype test; E = external public evidence; A = assumption; P = projection; Accel is fictional.
D4 [A]: +1/2/3 pp lead to quote and +3/6/9 pp quote to activation, core segments only. Added cost = handling proxy + ₹1.98 L allowance (₹50 × 3,956).
R2/D5 [P]: 600 per arm detects 4.5 pp; expected lift is 1.8 pp (power 23%); +2 pp needs 2,644 per arm. Stress CAC ₹15,572. Churn flag is immature.
